HARD ROCK CEMENT

unmatched competence

Our products are used for the construction of houses, traffic routes, infrastructure and commercial and industrial facilities, thus meeting the demands of a growing world population for housing, mobility and economic development.

We are on the road to carbon neutrality and at the center of our actions lies the responsibility for the environment. Together with our customers and partners, we drive innovation and work on building material for the future. So that the world can always build on us.

OUR CEMENT PRODUCTS

comes in two grades:

	HRC 32.5N
	HRC 22.5X

Hard Rock Cement can be used in a wide variety of applications from domestic concrete usage, plastering applications, civil work and large building operations. It is an eco-friendly, quality, cost-effective cement for general-purpose building applications for the production of concrete, plaster and mortars.

'N' and 'R' denotes early strength and the addition of high-grade cement extenders ensures professional quality, less water to produce a cohesive mix and long-term durability.

HRC 32.5N and 22.5X is a general purpose cement and fully complies with the requirements for the strength classes 32.5 and 22.5 in South African National Standard (SANS) 50197-1.

THE BENEFITS OF OUR CEMENT

- Product of choice for all types of 'home' concretes.
- Extremely versatile for a wide range of building applications.
- Consistent, convenient and cost-effective.
- Superior workability.
- Enhanced reaction, cohesion and finishing.
- Quicker setting time.
- Unmatched short-term and long-term strength.
- Reduced water requirements.
- Decreased permeability of hardened concrete.
- Maximum resistance to chemical attack.
- Less susceptible to cold weather conditions.
- Less susceptible to poor curing.
- Emits low-emission and is durable.
